Which Confidence Interval or Test Should I Use?

1. Mean – single sample – known σ or large sample ($n \geq 30$)
2. Mean – single sample – unknown σ (any sample size)
3. Means – two samples – matched pairs differences (any sample size)
4. Means – two samples – known $\sigma's$ or large samples ($n_1 \geq 30, n_2 \geq 30$)
5. Means – two samples – unknown $\sigma's$ (equal or different, any sample size)
6. Mean – two samples – unknown $\sigma's$ (equal σ_1=σ_2, any sample size)
7. Proportion – single sample (large sample)
8. Proportions – two samples (large samples)

Means or Proportions?

- Means: Data are continuous random variables (usually normally or approximately normally distributed with unknown mean)
  (Tests 1-6)
- Proportions: Data are counting "successes" following a binomial distribution
  (Tests 7-8)

Single or Two Samples?

- Means:
  Single Sample (Tests 1-2)
  Two Samples: (Tests 3-6)
- Proportions:
  Single Sample (Test 7)
  Two Samples: (Test 8)

If Two Samples: Matched Pairs or Independent Samples?

- Means:
  Matched Pairs: (Test 3)
  Independent Samples: (Tests 4-6)

- Proportions:
  Matched Pairs: (N/A)
  Independent Samples: (Test 8)

Standard Deviations: Known or Unknown (Population or Estimated from Samples)?

- Means:
  - Known Standard Deviation(s):
    - Single Sample: (Test 1)
    - Matched Pairs: (N/A)
    - Two Samples: (Test 4)
  - Unknown Standard Deviation(s)
    - Single Sample: (Test 2)
    - Matched Pairs: (Test 3)
    - Two Samples: (Test 5 if no assumptions about σ_1 and σ_2)
    - Two Samples: (Test 6 if assuming $\sigma_1 = \sigma_2$)

- Proportions:
  Not Applicable: Standard deviations are always calculated (estimated) using p.
  Single Sample (Test 7)
  Two Samples: (Test 8)

CASE : Does Class Attendance Matter?

- In a MATH 142 (Precalculus II) class students with attendance (less than 5 absences) are compared to student with low attendance (5 or more absences).
- Does the data provide evidence that attendance improves final score?

CASE : The 50 State Golf Marathon

- In 2005, three enthusiastic golfers from Spokane (Jack Hebner, Roger Crum and Arlie Hansen) set out on a journey to accomplish an ambitious goal: **To play 50 rounds of golf in 50 states in 30 days!**
- Their journey started on the Creek at Qualchan Golf Course in Spokane on June 1, 2005.
- 2 of the 3 golfers accomplished their goal and finished their 900th hole at the Kona Country Club in Hawaii on June 30, 2005.
