CASE : Comparison of Nutritive Values of Corn Diets

Plant scientists have developed varieties of corn that have increased amounts of the essential amino acid lysine. In a test of the protein quality of this corn, an experimental group of 20 one-day-old male chicks was fed a ration containing the new corn. A control group of another 20 chicks was fed a ration that was identical except that it contained normal corn. Here and in CORN.MTW are the weight gains (in grams) after 21 days. (Based on G. L. Cromwell et al., "A comparison of the nutritive value of *opaque-2*, *floury-2* and normal corn for the chick," *Poultry Science*, 47 (1968), pp. 840–847.)

Leading Causes of Death

Data are for the U.S.

Number of deaths for leading causes of death

- Heart disease: 647,457
- Cancer: 599,108
- Accidents (unintentional injuries): 169,936
- Chronic lower respiratory diseases: 160,201
- Stroke (cerebrovascular diseases): 146,383
- Alzheimer's disease: 121,404
- Diabetes: 83,564
- Influenza and pneumonia: 55,672
- Nephritis, nephrotic syndrome, and nephrosis: 50,633
- Intentional self-harm (suicide): 47,173

CASE : Leading Causes of Death in the US

Figure. Trends in the Ranking of Leading Causes of Death—US, 2019–2023.

Source: National Center for Health Statistics. National Vital Statistics System. Data for 2019–2022 are final. Data for 2023 are provisional.

Main Features of a Distribution

Symmetrical: Both sides of the distribution are approximately identical mirror images. There is a *line* of symmetry.

Skewed: One tail is stretched out longer than the other. The direction of skewness is on the side of the longer tail. (Right skewed vs. left skewed)

Bimodal/Unimodal: The distribution is bimodal (unimodal) if the distribution has two (one) major peak(s). The two largest classes are separated by one or more classes. Often implies two populations are sampled.

Normal: A symmetrical distribution is mounded about the mean and becomes sparse at the extremes

Outliers are isolated observations that deviate significantly from the “main” population.

Real Estate Prices

- The histogram below shows the real estate prices for 150 homes that were sold by a given real estate company. (prices in thousands of dollars)

Human Life Data

- The histogram below shows the age at death for a sample of people (men and women combined).

Salary Data for NFL Football Players (1991)

Salary Data for NFL Football Players – 30 years later

by Jilly Capello on June 7, 2021

Chiefs quarterback Patrick Mahomes signed the [biggest deal in NFL history](#), a 10-year contract valued at [\\$450 million](#). He and other star athletes bring home huge paychecks. But, what happens to [Mr. Irrelevant](#)? That's the title given to the last player chosen in the annual NFL draft. In 2020, Giants linebacker [Tae Crowder](#) received the honors as the final 255th pick.

Although [picked last](#), he still managed to secure a four-year contract that promises an average base salary of [\\$610,000](#). The Giants rookie is not the lowest-paid player in the NFL. Those bragging rights belong to a little-known tight end from the [Seattle Seahawks](#).

The lowest-paid NFL player for the 2019-20 season was none other than Seattle Seahawks' tight end [Tyrone Swoopes](#). The 25-year old free agent was drafted in 2017 and has been signed and waived nine times from the Seahawks' practice squad.

According to [7Up Sports](#), Swoopes was the lowest on the list, receiving a paltry salary of just [\\$378,000](#). By NFL standards, this doesn't amount to much considering the toll the sport takes on the athlete's body. To the average Joe, it's not chump change, and earning \$24,000 per game is not a bad deal.
